

HOSPITAL INFECTION CONTROL & CLINICAL PROTOCOLS

Module 101: Hand Hygiene, PPE, and Healthcare-Associated Infection Prevention

1. Course Overview & Learning Objectives

This module outlines standard precautions, WHO 5 Moments for Hand Hygiene, and proper sequence for donning and doffing Personal Protective Equipment (PPE).

- Understand the chain of infection and modes of transmission in clinical settings.
- Identify the Five Moments for Hand Hygiene as defined by WHO / DOH standards.
- Demonstrate correct selection, donning, and doffing of PPE without contamination.

WHO 5 Moments for Hand Hygiene:

1. Before touching a patient
2. Before clean/aseptic procedure
3. After body fluid exposure risk
4. After touching a patient
5. After touching patient surroundings

2. Hand Rub vs Hand Wash Protocols

Alcohol-based hand rub (ABHR) with 70% ethyl alcohol is the preferred method for routine antisepsis when hands are not visibly soiled. Friction must be applied for 20-30 seconds.

Wash with soap and water when hands are visibly soiled, contaminated with bodily fluids, or after caring for patients with suspected spore-forming pathogens (e.g. *Clostridioides difficile*).

PPE Donning and Doffing Order (Strict Compliance Required):

DONNING: 1. Gown -> 2. Mask/Respirator -> 3. Goggles/Face Shield -> 4. Gloves

DOFFING: 1. Gloves -> 2. Goggles/Face Shield -> 3. Gown -> 4. Mask -> 5. Hand Hygiene

Always perform immediate hand hygiene after removing gloves and face coverings.

3. Clinical Certification & Continuing Professional Development

Completion of this reading module and review of protocol satisfies institutional safety compliance.

Record your study hours under My CPD -> Log CPD Activity -> Clinical Safety.
